

compare the cash flow and time weighted incremental cash flow.

	Cash Flow	Time weighted incremental cashflow
Definition	Cash flows refers to the total amount of money being transferred into and out of a business, project or investment over a specific period.	Time-weighted incremental cashflow is a method of measuring the additional cashflow generated by a particular decision or project while taking into account the timing of these cash flows.
Focus	Cash flows focuses on the total inflows and outflows over time without adjusting for the timing.	Time weighted incremental cashflow emphasizes the timing of cashflows adjusting for the time value of money.
Usage	Cash flow analysis is more general and used for liquidity assessment.	Time weighted incremental cashflow is used in investment analysis project evaluation and decision making process where the timing of cash flow is crucial.
